

ABHISHEK SRIVASTVA

Full Stack Developer (Gen AI) & Lead Mobile Engineer

Noida, India +91 7004355106 abhishek.srivastva.dev@gmail.com
linkedin.com/in/abhishek-srivastva-04a9b3175

EXECUTIVE SUMMARY

Accomplished Full Stack & Technical Lead Engineer with 7+ years of overall software engineering experience, including 3 years specializing in Generative AI, Multi-Agent Orchestration, and LLM Application Architecture alongside deep mastery of React and React Native mobile/web ecosystems. Proven track record of spearheading distributed cloud systems, high-accuracy RAG pipelines, and enterprise-grade cross-platform applications across healthcare, fintech, B2B marketplaces, and global commodity trading. Adept at leading engineering squads, translating complex business requirements into robust production solutions, implementing zero-trust security (UAE Pass, Biometrics, Apple/Google Wallet), and delivering exceptional client-facing technical leadership from conception through deployment.

CORE TECHNICAL COMPETENCIES

AI & Agentic Systems:

Multi-Agent Orchestration LLM Architecture RAG Pipelines
LangChain LangGraph Transformers Vector Embeddings
Semantic Search Prompt Engineering

Languages:

Python TypeScript JavaScript (ES6+) SQL
HTML5 / CSS3

Mobile & Frontend:

React Native (iOS & Android) React.js React Hooks Redux
Redux Toolkit Redux-Saga Reusable UI Systems
State Management

Backend & APIs:

FastAPI REST APIs GraphQL MongoDB DynamoDB
Node.js Microservices

AWS & Cloud Infrastructure:

AWS Cognito (OTP/Auth) AWS Chime (Video Conferencing)
AWS Amplify Firebase (Firestore/Auth)

Security & Enterprise Tech:

Apple & Google Wallet UAE Pass Authentication
Biometrics (Face ID / Fingerprint) Git Bitbucket CI/CD

PROFESSIONAL WORK EXPERIENCE

- Lead Engineer (React Native & Full Stack Gen AI) | Prismberry Technologies Pvt Ltd** 28 May 2024 – Present | Noida, India
 - Engineering Leadership:** Lead and manage a dynamic engineering team building high-performance mobile (Android & iOS) and web applications, ensuring adherence to client needs and architectural standards.
 - Generative AI & Agentic Integration:** Spearhead development of intelligent conversational platforms and agentic workflows using Python, FastAPI, LangGraph, and RAG alongside modern React interfaces.
 - Flagship Client Architecture:** Serve as Lead Engineer for enterprise healthcare application (Smartcare by Cigna), managing a 4-member squad, orchestrating UAE Pass authentication, digital wallet passes, and biometric security.
 - Client Governance:** Maintain direct client communication, establish CI/CD practices, conduct code reviews, and drive agile delivery to accelerate time-to-market.
- React Native Developer & Module Lead | Spineor Webservices Pvt Ltd** 04 July 2022 – 27 May 2024 | Mohali, India
 - Cross-Platform Development:** Led design and construction of production mobile apps for iOS and Android platforms, guiding a dedicated team of developers and managing client interactions.
 - AWS & Real-Time Media:** Integrated AWS Chime SDK for low-latency interactive video conferencing, AWS Cognito for secure phone/email OTP verification, and AWS GraphQL APIs for international Canadian accounts.
 - Offline-First & Performance:** Built robust offline-first synchronization architectures and reusable UI component libraries, significantly boosting responsiveness and user retention under fluctuating connectivity.
- Software Developer | Live Deftsoft Informatics Pvt Ltd** 11 April 2019 – 10 June 2022 | Mohali, India
 - Full-Lifecycle Delivery:** Designed and constructed mobile applications for both iOS and Android platforms individually and in cross-functional agile teams.
 - Backend Integration:** Integrated Firebase Authentication, Firestore database, REST APIs, push notifications, and Redux state management across automotive, social, and music applications.

SELECTED ENTERPRISE & GENERATIVE AI PROJECTS

AgentIQ — AI-Powered Enterprise Multi-Agent Platform

LATEST PROJECT • GEN AI

Multi-Agent OrchestrationLangGraphLangChainRAG PipelinesPythonFastAPIVector EmbeddingsReact.jsEnterprise DBs

Overview: AgentIQ is an AI-powered enterprise platform providing multiple specialized AI agents that enable users to interact with business data, documents, and enterprise systems using natural language. Replaces manual document searching, complex UI navigation, and manual SQL query writing with conversational workflows. Each agent connects directly to designated enterprise knowledge sources and databases.

- Multi-Agent Orchestration:** Architected stateful multi-agent workflows with **LangGraph & LangChain** for collaborative plan execution, autonomous task decomposition, and synthesizing enterprise data across silos.
- Enterprise RAG Architecture:** Engineered high-precision RAG pipelines utilizing dense vector embeddings, semantic hybrid retrieval, and context reranking over large-scale corporate document stores.
- FastAPI Microservices:** Built asynchronous backend endpoints in **FastAPI & Python** to power real-time agent execution, dynamic SQL translation, and low-latency token streaming.
- Conversational UI:** Created an interactive, responsive conversational frontend in **React.js** supporting multi-turn dialogue, markdown/tabular rendering, and citations.

Smartcare by Cigna — Centralized Healthcare Insurance Portal

React NativeApple & Google WalletUAE Pass AuthBiometrics (Face ID/Fingerprint)ReduxREST APIsiOS & Android

Overview: Centralized mobile hub for Cigna Insurance Middle East customers covered under "Smartcare by Cigna" plans, providing instant access to healthcare providers, policy details, claims management, and teleconsultations.

- Technical Leadership:** Served as Lead Engineer managing 4 developers, architecting complex modules and ensuring seamless communication with enterprise clients.
- Digital Wallet Passes:** Spearheaded native Apple Wallet and Google Wallet integration, allowing insured users to save and access digital medical cards directly from mobile lock screens.
- Enterprise Security:** Integrated **UAE Pass authentication** and on-device biometric security (Face ID & Fingerprint) for trusted, zero-friction verification.
- Healthcare Workflows:** Delivered clinic/hospital geolocation search, doctor appointment bookings, claim submission & status tracking, e-prescriptions, and benefits overview.

Exhibition Gear — B2B Equipment Rental Marketplace

React NativeRedux ToolkitB2B MarketplaceCatalog ArchitectureREST APIsOrder Lifecycle

Overview: B2B equipment rental marketplace application enabling event exhibitors to rent exhibition furniture, electricals, and lighting, while allowing equipment vendors to manage product listings and orders.

- Lead Architecture:** Led end-to-end mobile app development using React Native, building reusable and scalable UI components for both Android and iOS.
- Marketplace Capabilities:** Engineered vendor onboarding, catalog management, real-time rental booking, and multi-state order tracking.
- API Integration:** Integrated REST APIs for user authentication, product listings, and order lifecycle management in close collaboration with backend teams.

Tradyon — Global Agri-Commodity Trading Platform

React NativeOffline-First ArchitectureWhatsApp IntegrationData Sync EngineREST APIs

Overview: Mobile application engineered for global agricultural commodity traders to manage business contacts, trade opportunities, and communications during international trade expos with offline access.

- Offline-First Engineering:** Engineered offline-first architecture for uninterrupted usage at trade conventions without reliable internet, synchronizing data automatically once reconnected.
- Trade CRM & Workflows:** Implemented contact intelligence, opportunity pipelines, follow-up notifications, and one-tap WhatsApp integration for instant communication.
- Performance Optimization:** Optimized UI rendering and local data structures to guarantee sub-second screen transitions under large contact databases.

Step — AWS-Powered Fitness & Video Conferencing App

React NativeAWS Chime SDKAWS CognitoAWS AppSync / GraphQLReact Hooks

Overview: Comprehensive fitness and live virtual coaching mobile application built for Canadian clients, leveraging deep AWS cloud capabilities for video broadcasting and identity management.

- Real-Time Video Conferencing:** Integrated **AWS Chime SDK** into React Native for high-definition, low-latency multi-participant video sessions between trainers and clients.
- Cloud Identity & Auth:** Implemented secure authentication using **AWS Cognito** supporting email and mobile phone OTP verification.
- Full Frontend Architecture:** Developed frontend with functional components and React Hooks, implementing GraphQL APIs and handling Canadian client communications.

ADDITIONAL SELECTED ENGINEERING PROJECTS

The Auto Parts — Automotive E-Commerce Mobile Platform

React NativeGraphQL APISocial OAuth (Google & Facebook)E-Commerce ArchitectureRedux

Overview: Mobile companion application supporting the high-traffic live enterprise automotive parts marketplace ([theautopartsshop.com](#)), serving tens of thousands of catalog items.

- Engineered complete frontend mobile experience from scratch, managing UI design, component hierarchy, and GraphQL API integrations.
- Integrated social authentication via Facebook and Google SDKs, category-based auto part filters, cached searches, and streamlined cart/checkout workflows.

Digitracker — Healthcare Platform Administration Suite

React.jsReact NativeHealthcare AdminRESTful APIsRole-Based Access

Overview: Dedicated administrative platform and mobile tool enabling healthcare administrators to manage clinical data, patient records, and operational website content.

- Architected the complete frontend administration interface, data management consoles, and secure RESTful API integrations for real-time synchronization.
- Implemented strict role-based access control (RBAC), data audit logs, and optimized table rendering for large administrative datasets.

Loomylife — Privacy-Centric Social Networking Application

React NativeGoogle OAuthPush NotificationsPrivacy Circles ModelFirebase

Overview: Mobile social application empowering users to establish friend circles with granular, customizable privacy settings for photo and post sharing.

- Implemented user authentication with Gmail, interactive feeds, media compression, and real-time push notification pipelines via Firebase Cloud Messaging.
- Engineered custom privacy filtering logic allowing segmented content visibility across user-defined intimate and public circles.

Musiclusive — Music Composer Collaboration Platform

React NativeFirebase AuthCloud FirestoreCloud StorageAudio Playback

Overview: Community application for music composers and creators to publish original compositions, discover fellow artists, and interact.

- Developed mobile application from scratch, leveraging Firebase Cloud Firestore and Authentication for rapid serverless delivery.
- Implemented audio post creation, creator profile pages, social engagement (likes, comments), and cloud storage streams for music tracks.

Preshawash — On-Demand Mobile Vehicle Care Service

React NativeOn-Demand DispatchREST API IntegrationUI DesignGeolocation

Overview: On-demand automotive cleaning service application connecting vehicle owners with professional mobile cleaning technicians.

- Developed intuitive booking interfaces, service package selections, and REST API calling for technician scheduling and dispatch.
- Integrated location-based address autocompletion and dynamic pricing calculations based on vehicle class and service tier.

EDUCATION

Kuvempu University

Bachelor of Science in Information Technology (B.Sc. IT)

Specialization: Computer Science | Graduated: 2016

Core: Data Structures, Algorithms, Software Engineering, DBMS, OOP

PROFESSIONAL CERTIFICATION

Hewlett Packard Enterprise (HPE)

Certificate in Professional Skills for IT Software Development

Awarded for Android Skills Assessment & Development Excellence

Credential verifying mobile engineering mastery and enterprise development practices

METHODOLOGIES & ARCHITECTURE

- Agile / Scrum Sprint Leadership & Code Reviews
- Microservices & Event-Driven Architecture
- Offline-First Design & Low-Latency API Optimization
- Test-Driven Development (TDD) & CI/CD Pipelines

LANGUAGES & CORE STRENGTHS

- English: Full Professional Working Proficiency
- Hindi: Native / Bilingual Proficiency
- Leadership: Team Mentoring, Client Governance, Architecture Design, Multi-Agent Orchestration
